

Hepatitis B surface antigen

INVESTIGATION

RESULT

NORMAL RANGE

HBsAg
(Method: immuno chromatography)

NEGATIVE

NEGATIVE

NEGATIVE : Presumed not currently infected or if infected antigens have not yet reached detectable levels

POSITIVE : Indicative of acute or chronic Hepatitis B virus infection or chronic HBV carrier state.

Name : Mrs. ANJALI
Age/Gender : 21YEARS/FEMALE

Bill Number : M121
Bill Date : 03-Apr-2024 05:45 PM

NOTE : The test is a screening test. It should not be used as a sole criterion for diagnosis of Hepatitis B. Positive results should be confirmed by DNA PCR.

Sample Type : SERUM
